

Short CV

Florian Klein is director of the Institute of Virology and full professor at the University of Cologne. His research focuses on the development of human B lymphocytes and antibodies, with a particular interest in the humoral immune response to viral pathogens. Together with his team, he employs new approaches for single B cell analyses and humanized mouse models. In addition, his team conducts early-phase clinical trials to translate basic laboratory findings into clinical applications. Florian received his MD degree from Cologne University in 2005 following clinical training in internal medicine. In 2009, he worked at the Rockefeller University, where he became Instructor in Clinical Investigation in 2011 and Assistant Professor in 2013. He returned to Cologne University in 2015.
